

Appendix F Environmental Commitments Record

CEQA, Public Resources Code Section 21081, and Sections 15091 and 15097 of the State CEQA Guidelines require that a Mitigation Monitoring and Reporting Program be adopted when the Lead Agency (in this case the RCTC) adopts an environmental document. The purpose of the Environmental Commitments Record (ECR) is to fulfill this requirement under CEQA and to assign responsibility for the implementation, monitoring, and timing of each mitigation measure that has been identified to reduce an identified environmental impact to a less than significant level. The Lead Agency is required to ensure compliance with each of the adopted mitigation measures in the ECR because additional significant environmental impacts could result from the project if the mitigation measures are not implemented. Because RCTC will administer the design, right of way acquisition, and construction of the project, all the mitigation measures will be the responsibility of RCTC to implement.

The attached table lists all feasible mitigation measures adopted to reduce potentially significant impacts. Following the project mitigation measures are project design features and other project components that would also serve to avoid or substantially reduce adverse project impacts, where possible. The three columns on the right side of the table list the timing of the mitigation measure, project design feature, or project component and the party responsible for ensuring that the mitigation measure is implemented. The far-right column is left blank to allow staff to add the verification date of each mitigation measure, project design feature, or project component. This column should be used as a reference for verifying that each of the mitigation measures, project design features, or project components is implemented and that ongoing mitigation measures are regularly checked. Once the project is constructed, a report shall be submitted to FHWA that reports on the project's compliance with the mitigation measures and is also maintained in RCTC's files.

It should be noted that the mitigation measures and project design features for the MCP Build Alternatives do not necessarily apply along the entire length of each alternative. Because few of the identified impacts occur along the entire length of each alternative, the majority of the measures and project design features do not apply along the entire length of each alternative. For example, measures related to biological resources would apply only in those areas along the alignment where the affected types of biological resources occur but would not apply in developed areas

where none of those biological resources occurs. In summary, each measure and project design feature applies at those locations along each alignment where the type of impact addressed by that measure/project design feature could potentially occur. As part of the construction specifications for the selected alternative, detailed information on the applicability of each measure/project design feature along the alignment will be described.

Environmental Commitments Record

LAND USE					
LU-1	<p>Pedestrian Access During Construction. During site preparation, disturbance, grading, and construction, the Riverside County Transportation Commission (RCTC) Resident Engineer will require the Construction Contractor to maintain pedestrian access to adjacent land uses in the construction area throughout the construction period. If existing access points are disrupted, alternative access will be provided. Appropriate signage and temporary sidewalks will be provided by the Construction Contractor, as needed, throughout the construction phase of the project, and the Construction Contractor shall provide and maintain appropriate signage to direct both pedestrian and vehicular traffic to businesses via alternate routes. Disabled access, consistent with the requirements of the Americans with Disabilities Act, will also be maintained during construction by the Construction Contractor.</p>	RCTC Resident Engineer	During site preparation, disturbance, grading and construction		
LU-2	<p>Pedestrian Access during Project Operation. During final design, the RCTC Project Engineer will ensure that pedestrian access across the Mid County Parkway (MCP) facilities is included in the permanent project features and that those features are designed consistent with applicable California Department of Transportation (Caltrans) and/or local jurisdiction standards.</p>	RCTC Project Engineer	During final design		
LU-3	<p>Public Information Field Office. Prior to and during site preparation, disturbance, grading, and construction, the RCTC Project Manager will establish one or more public information field office(s) near the construction site(s). The field office(s) will serve the following purposes:</p> <ul style="list-style-type: none"> • Provide the community and businesses with a physical location where information pertaining to construction can be obtained in both English and Spanish • Enable RCTC staff to facilitate communication between RCTC staff and the Construction Contractor with residents and business operators • Notify property owners, residents, and businesses of major construction activities (e.g., utility relocation/disruption, rerouting of delivery trucks) at least 14 days prior to the disruption • Respond to phone inquiries • Coordinate business outreach programs 	RCTC Project Manager	Prior to and during site preparation, disturbance, grading, and construction		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
LU-4	<p>March Joint Powers Authority Airspace Review. During final design, the RCTC Project Engineer will request the March Joint Powers Authority to conduct an airspace review of the MCP project to ensure that the MCP project does not introduce new hazards to the operations at the March Joint Powers Authority Airport.</p>	RCTC Project Engineer	During final design		
LU-5	<p>General Plan Consistency. Following selection of a Preferred Alternative and approval of the MCP project for implementation, the RCTC Project Manager will request that the County of Riverside and the City of Perris amend their respective General Plans to reflect the final MCP alignment, interchange locations, and modification of land use designations for property that will be acquired for the project.</p>	RCTC Project Manager	Following approval of the MCP project and selection of a preferred alternative for implementation		
LU-6	<p>San Jacinto Wildlife Area Replacement Land. Prior to the initiation of project construction in the vicinity of the intersection of Bernasconi Road and the Ramona Expressway, the RCTC will acquire replacement land for the 3.4 acres (ac) of land acquired for the project from the San Jacinto Wildlife Area (SJWA) as follows:</p> <ul style="list-style-type: none"> • The replacement land will be provided at a 2:1 ratio (for a total 6.8 ac of replacement land) • The replacement land will be from areas adjacent to the Davis or Potrero Units of the SJWA or another area acceptable to California Department of Fish and Game (CDFG) • After RCTC acquires the replacement land, it will convey the fee ownership for the replacement land to CDFG. 	RCTC Project Manager	Prior to the initiation of project construction		
LU-7	<p>San Jacinto Wildlife Area MSHCP Requirements. The MCP project is a Covered Activity of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) and, therefore, the use of 3.4 ac of land in the SJWA would be subject to the requirements for replacement of Public/Quasi-Public (P/QP) lands as required by the Western Riverside County MSHCP. Those requirements for habitats in existing P/QP Lands used by a project are the purchase and dedication into the MSHCP Conservation Area of replacement land at not less than a ratio of 1:1.</p> <p>RCTC's compliance with the requirements of Measure LU-6 would also satisfy the requirements for replacement of P/QP Lands used by the project under the Western Riverside County MSHCP.</p>	RCTC Project Manager	Prior to construction		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
LU-8	<p>San Jacinto Wildlife Area Uniform Act. For the acquisition of the 3.4 ac in the SJWA, RCTC's Right-of-Way Agents will follow the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Uniform Act) and the 1987 Amendments as implemented by the Uniform Relocation Assistance and Real Property Acquisition Regulations for Federal and Federally Assisted Programs.</p>	RCTC Project Manager	Prior to construction		
LU-9	<p>Existing Pedestrian and Trail Facilities. During final design, the RCTC Project Engineer will develop a Pedestrian and Trail Facilities Temporary Closure Plan for addressing the short-term impacts to existing pedestrian facilities and trails crossings or within the construction limits of the project. Trails are defined as facilities other than sidewalks including pedestrian, bicycle, and equestrian trails, and bike lanes.</p> <p>Specifically, the Plan will address procedures for:</p> <ul style="list-style-type: none"> • Identification of facilities that will be closed temporarily during construction • Temporarily closing sidewalks and trails during construction • Developing and implementing detours for closed sidewalks and trails • Coordinating sidewalk and trail closures and detours with the local jurisdictions with authority over the sidewalks and trails • Criteria for detour routes and facilities • Information signing for closures and detours • Requirements for compliance with the Americans with Disabilities Act • Maintaining signing for closures and detours throughout the closure period and replacing lost or damaged signing • Restoring pedestrian and trail facilities at the completion of project construction <p>Prior to the initiation of project activities that will require the temporary closure of a pedestrian or trail facility, the RCTC Project Engineer will require the Construction Contractor to comply with and implement the procedures in the Pedestrian and Trail Facilities Temporary Closure Plan for the affected sidewalk or trail facility crossing.</p>	RCTC Project Engineer	During final design		
	<p>Prior to the initiation of project activities that will require the temporary closure of a pedestrian or trail facility, the RCTC Project Engineer will require the Construction Contractor to comply with and implement the procedures in the Pedestrian and Trail Facilities Temporary Closure Plan for the affected sidewalk or trail facility crossing.</p>	RCTC Project Engineer	Prior to the initiation of project activities		
LU-10	<p>Temporary Closures of Trails. Prior to any temporary closures of trails, RCTC Resident Engineer will require the project Construction Contractor to meet with the Riverside County Department of Public Works (RCDPW) to review the location and need for each closure. Detours for each closure will be developed in consultation with the RCDPW.</p>	RCTC Resident Engineer	Prior to any temporary closures of trails		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
LU-11	Signing for Alternate Trail Routes. The RCTC Resident Engineer will require the project Construction Contractor to develop signs directing trail users to alternative routes in consultation with RCDPW and the local jurisdictions through which detours would be routed. Appropriate directional and informational signage will be provided by the project Construction Contractor prior to each closure and far enough away from the closure so that trail users will not have to backtrack to get to the detour route.	RCTC Resident Engineer	Prior to construction		
LU-12	Contact Information at Trail Detours. The RCTC Resident Engineer will require the project Construction Contractor to provide a contact number and information that will be provided for trail users to contact the project Construction Contractor regarding upcoming or active trail closures. The Construction Contractor will also be required to provide that information to the RCDPW and the Public Works Departments in the jurisdictions where the closures/detours are located.	RCTC Resident Engineer	Prior to any temporary closures of trails		
LU-13	Restoration of Impacted Trail Segments. The RCTC Resident Engineer will require the project Construction Contractor to return trail segments closed temporarily during construction to the RCDPW in their original, or better, condition after completion of construction, and those temporarily closed areas will be returned to the original owner (the RCDPW). After project construction, the RCTC shall ensure that access to and connectivity of all recreational trails are restored for all recreational users.	RCTC Resident Engineer	During construction		
LU-14	Permanent Trail Closures. Prior to construction, the RCTC will coordinate with affected local jurisdictions to inform the public of permanent trail closures and opportunities for alternative existing trails that are available to maintain trail connectivity within the community.	RCTC Resident Engineer	Prior to construction		
LU-15	Permanent Trail Changes. During final design, the RCTC will coordinate with the affected local jurisdiction to determine the new location and/or re-routing of an impacted trail outside the MCP right of way in order to maintain trail connectivity within the community.	RCTC Project Engineer	During final design

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
GROWTH					
No mitigation measures for growth-related effects are required.					
FARMLANDS AND TIMBERLANDS					
AG-1	Notification to Agricultural Property Owners. Prior to the start of any construction activity adjacent to farmlands, the Riverside County Transportation Commission (RCTC) shall provide written notification to agricultural property owners or leaseholders immediately adjacent to the disturbance limits for the Mid County Parkway (MCP) project. The notification is to indicate the intent to begin construction, including an estimated date for the start of construction. In order to provide agricultural property owners or leaseholders sufficient lead time to make any changes to their operations due to MCP project construction, this notification shall be provided at least 3 but no more than 12 months prior to the start of construction activity.	RCTC Project Manager and/or Resident Engineer	At least 3-12 months prior to the start of any site preparation or other construction activity adjacent to farmlands		
AG-2	Temporary Livestock and Equipment Crossings. Prior to the start of any construction activity adjacent to any farmlands, the RCTC shall coordinate with agricultural property owners or leaseholders to provide temporary livestock and equipment crossings of the MCP right of way to minimize impacts to livestock movement, and routine operations and normal business activities during project construction.	RCTC Project Manager and/or Resident Engineer	Prior to the start of any site preparation or other construction activity adjacent to farmland or grazing land		
AG-3	Equipment Crossings. During final design, and in coordination with property owners of lands in use for agricultural operations, the RCTC will finalize the realignments of any affected access roads to provide equipment crossings to minimize impediments to routine agricultural operations and normal business activities that may result from long-term project operation.	RCTC Resident Engineer	Prior to fencing the MCP right-of-way		
AG-4	Notification to Agencies. Prior to completion of right of way acquisition, the RCTC shall prepare and send all required notices to the Director of Conservation and the local governing body responsible for the administration of agricultural preserves pursuant to Section 51291 of the Williamson Act for any roadways within established agricultural preserves.	RCTC Right-of-Way Agents	During right of way acquisition

COMMUNITY IMPACTS AND RELOCATION (INCLUDING ENVIRONMENTAL JUSTICE)					
CC-1	<p>School Safety. During all site preparation, grading, disturbance, and construction, the Riverside County Transportation Commission (RCTC) Resident Engineer shall require the Construction Contractor to coordinate with the Val Verde Unified School District (School District) to ensure that school crossing guards are present in the vicinity of any construction areas near schools in and near the project limits when students are present, to protect the safety of students crossing streets near project construction areas.</p> <p>In the event that school crossing guards are not provided by or available from the School District, the RCTC Resident Engineer will require the Construction Contractor to provide traffic control staff at crossings near the project construction limits used by students when students are present.</p>	RCTC Resident Engineer	During all site preparation, grading, disturbance, and construction		
CC-2	<p>Placentia Avenue. If Alternative 9 Modified is selected as the preferred alternative, the RCTC Project Engineer shall ensure that the final design plans include provisions for restoration of the disrupted areas in residential communities along Placentia Avenue with landscaping and hardscape treatments consistent with the area's existing community character.</p>	RCTC Project Engineer	Prior to completion of final design		
CC-3	<p>Where property acquisition and relocation are unavoidable, RCTC's Right-of-Way Agents will follow the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Uniform Act) and the 1987 Amendments as implemented by the Uniform Relocation Assistance and Real Property Acquisition Regulations for Federal and Federally Assisted Programs.</p> <p>For properties where a partial acquisition results in the removal of some or all of the parking for the property, RCTC's Right-of-Way Agents will conduct parking studies to investigate the use of adjacent acquisitions for replacement parking, reconfiguring the remaining parking spaces and lots on the property, restriping parking spaces, enlarging parking lots, and reconfiguring driveways and/or delivery locations to reduce the project effects on the property.</p>	RCTC's Right-of-Way Agents	During property acquisition		
CC-4	<p>Spanish Speaking Relocation Agents. During the right-of-way acquisition process, RCTC Right-of-Way Agents will ensure that Spanish-speaking Right-of-Way Agents and staff are available to work with Spanish-speaking property and business owners, residents, tenants, and other persons affected by the property acquisition for the project during all phases of the property acquisition and relocation process. The RCTC Right-of-Way Agents will document in writing that all Spanish-speaking parties were offered services with Spanish-speaking Right-of-Way Agents and staff and whether each party</p>	RCTC Right-of-Way Agents	During the right-of-way acquisition process

	requested Spanish-speaking Right-of-Way Agents and staff or not.				
UTILITIES AND EMERGENCY SERVICES					
US&E-1	Fire Protection. Prior to site preparation, disturbance, grading, and construction, the Riverside County Transportation Commission (RCTC) Project Engineer will require the Construction Contractor to request the Riverside County Fire Department to identify areas adjacent to the project construction limits which are subject to wildfires and to define when the high fire season occurs. The RCTC Project Engineer will note all areas subject to wildfires on the project plans and specifications.	RCTC Project Engineer	Prior to site preparation, disturbance, grading, and construction		
	During site preparation, disturbance, grading, and construction in areas subject to wildfires as determined by the Riverside County Fire Department, the RCTC Project Engineer will require the Construction Contractor to install signs around those construction sites warning of high fire risk. In addition, during the high fire season as declared by the Riverside County Fire Department, the RCTC Project Engineer will require the Construction Contractor to post information on area closings and other relevant information provided by the Fire Department around the construction sites adjacent to areas subject to wildfires. The phone numbers for the Riverside County Fire Department and other emergency services providers (law enforcement, emergency medical, etc.) will be provided on these signs.	RCTC Project Engineer	During site preparation, disturbance, grading and construction in areas subject to wildfires		
US&E-2	Fire Protection Access During Construction. Prior to site preparation, disturbance, grading, and construction, the RCTC Project Engineer will request the Riverside County Fire Department to identify fire and emergency access roads crossing or immediately adjacent to the construction areas. The RCTC Project Engineer will show the identified fire and emergency access roads on the project plans and specifications.	RCTC Project Engineer and the Construction Contractor	Prior to site preparation, disturbance, grading and construction in areas with emergency access roads crossing or adjacent to construction areas.		
	During site preparation, disturbance, grading, and construction, the RCTC Project Engineer will require the Construction Contractor to maintain access for emergency personnel and vehicles to existing fire roads crossing and immediately adjacent to the construction areas as identified by the Riverside County Fire Department. The RCTC Project Engineer will require the Construction Contractor to clearly mark those access locations with warnings for construction personnel to avoid blocking those locations, even temporarily for short periods of time, with construction equipment, personal vehicles, waste/trash, or materials storage.	RCTC Project Engineer	During site preparation, disturbance, grading and construction in areas with emergency access roads crossing or adjacent to construction areas.		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
US&E-3	<p>Fire Protection Access During Operations. During final design, the RCTC Project Manager and RCTC Project Engineer will coordinate with the Riverside County Fire Department to incorporate long-term provision of access to the existing fire road grid in the project final design and specifications. The long-term access locations must be approved by the California Department of Transportation (Caltrans) along Interstate 215 (I-215) and State Route 79 (SR-79), the local jurisdictions with land use authority, and the Riverside County Fire Department.</p>	RCTC Project Manager and RCTC Project Engineer	During final design		
US&E-4	<p>Fire Protection During Construction. Prior to site preparation, disturbance, grading and construction, the RCTC Project Engineer will request the Riverside County Fire Department to identify areas of fire hazard adjacent to construction areas and to request recommendations for appropriate fuel modification techniques for those areas. The RCTC Project Engineer will note the identified fire hazard areas on the project plans and specifications and indicate the need for fuel modification techniques in those areas.</p>	RCTC Project Engineer	Prior to site preparation, disturbance, grading and construction		
	<p>During site preparation, disturbance, grading, and construction, the RCTC Project Engineer will require the Construction Contractor to install signs around construction sites in identified fire hazard areas and to implement fuel modification techniques as soon as possible in those areas to ensure that those techniques are in place prior to the operation of substantial amounts of construction equipment in the area. The phone numbers for the Riverside County Fire Department and other emergency services providers (law enforcement, emergency medical, etc.) will be provided on these signs.</p>	RCTC Project Engineer	During site preparation, disturbance, grading and construction in identified fire hazard areas		
US&E-5	<p>Fire Protection During Construction. To minimize the risk of wildfire during site preparation, disturbance, grading, and construction, the RCTC Project Engineer will require the Construction Contractor to:</p> <ul style="list-style-type: none"> • Ensure that all construction equipment and vehicles are equipped with readily accessible fire extinguishers and shovels • Inspect all construction equipment and vehicles weekly to verify they are in compliance with minimum fire safety standards • Document the inspections and compliance with these requirements in weekly reports to the RCTC Project Engineer 	RCTC Project Engineer	During site preparation, disturbance, grading and construction in identified fire hazard areas		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
US&E-6	<p>Fire Protection. During final design, the RCTC Project Engineer, in consultation with a qualified biologist (Contract Qualified Biologist) under contract to RCTC, will incorporate brush management zones in areas adjacent to existing reserves, the Multiple Species Habitat Conservation Plan (MSHCP) Conservation Area, and other undeveloped lands in accordance with Section 6.4 of the MSHCP in the final project plans and specifications.</p>	RCTC Project Engineer	During final design		
	<p>During site preparation, disturbance, grading, and construction, the RCTC Project Engineer will require the Construction Contractor to implement the provision of brush management zones shown in the project plans and specifications in areas adjacent to existing reserves, the MSHCP Conservation Area, and other undeveloped lands in accordance with Section 6.4 of the MSHCP.</p>	RCTC Project Engineer	During site preparation, disturbance, grading and construction in brush management zones		
US&E-7	<p>Fire, Emergency Medical, and Law Enforcement Call Boxes. During final design, the RCTC Project Engineer will incorporate emergency call boxes in the final plans and specifications, consistent with Riverside County Fire Department, Caltrans, and/or local jurisdictions' policies on emergency call boxes.</p>	RCTC Project Engineer	During final design		
US&E-8	<p>Utilities. During final design, the RCTC Project Engineer will prepare plans showing the utility facilities expected to be relocated or protected in place during project construction. The RCTC Project Engineer will coordinate the final plans for the proposed relocations/protection in place with each affected utility provider. During this process, the RCTC Project Engineer will:</p> <ol style="list-style-type: none"> 1. Continue to seek to avoid utility relocations by refining the project design and/or protection of existing utilities in place during and after construction; 2. If relocation is necessary, to relocate utilities across/within the MCP project right of way, other existing public right of ways and/or where easements are required; 3. Receive approval from each utility provider regarding the proposed relocation and/or protection in place; and 4. Incorporate the final relocation/protection in place measures in the final plans and specifications. 	RCTC Project Engineer	During final design		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
TRAFFIC AND TRANSPORTATION/PEDESTRIAN AND BICYCLE FACILITIES					
TR-1	<p>Traffic Management Plan. During final design, the Riverside County Transportation Commission (RCTC) Project Engineer will prepare the Final Traffic Management Plan (TMP), which will be based on the Preliminary TMP developed for the Project Report, to address specific short-term traffic impacts during construction of the project. The objectives of the Final TMP are to:</p> <ul style="list-style-type: none"> • Maintain traffic safety during construction • Effectively maintain an acceptable level of traffic flow throughout the transportation system during construction • Minimize traffic delays and facilitate reduction of overall duration of construction activities • Minimize detours and impacts to pedestrians and bicyclists • Foster public awareness of the project and related impacts • Achieve public acceptance of construction of the project and the Final TMP measures. <p>The RCTC Project Engineer will submit the Final TMP to the California Department of Transportation (Caltrans) for review and approval during final design and prior to any construction activities affecting Interstate 215 (I-215) or State Route 79 (SR-79). The Final TMP will also be reviewed with the local jurisdictions, which would or could experience short-term traffic impacts during project construction.</p> <p>The Preliminary TMP contains the following elements intended to reduce traveler delay and enhance traveler safety. These elements will be refined during final design and incorporated in the Final TMP for implementation during project construction.</p> <ul style="list-style-type: none"> • Public Information/Public Awareness Campaign (PAC). The primary goal of the PAC is to educate motorists, business owners/operators, residents, elected officials, and government agencies about construction activities and associated impacts. The PAC is an important tool for reaching target audiences with important construction project information and will include, but not be limited to: <ul style="list-style-type: none"> • Rideshare information • Brochures and mailers 	RCTC Project Engineer	During final design		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	<ul style="list-style-type: none"> • Media releases • Paid advertising • Public meetings • Broadcast fax and email services • Telephone hotlines • Notification to targeted groups • Commercial traffic reporters/feeds • Project website • Visual information • Local cable television and news • Internet postings • Traveler Information Strategies. The effective implementation of a traveler information system during construction is crucial for enabling motorists to make informed decisions about their travel plans and options with real-time traffic information. That real-time traffic information will include information on lane closures, detours, delays, access to adjacent land uses, "businesses are open" signing, and other signing and information to assist travelers in navigating through and in construction areas. Key components of this system will include, but not be limited to: <ul style="list-style-type: none"> • Fixed changeable message signs • Portable changeable message signs • Ground-mounted signs • Automated work zone information systems • Highway advisory radio • Lane closure website • Department highway information network • Bicycle and pedestrian information • Commute Smart website 				

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	<ul style="list-style-type: none"> • Incident Management. Effective incident management will ensure that incidents in construction areas are cleared quickly and do not lead to substantial delays for the traveling public through work zones. Incident management includes, but is not limited to: <ul style="list-style-type: none"> • Construction Zone Enhanced Enforcement Program (COZEEP) • Freeway service patrol for construction • Traffic surveillance stations • Transportation Management Center Unit 370 • Traffic management team • Towing services • Construction Strategies. The Final TMP will include procedures to lessen the effect of typical construction activities and will include, but not be limited to, consideration of the following: <ul style="list-style-type: none"> • Conflicts with other projects and special events • Construction staging alternatives • Mainline lane closures • Local road closures • Ramp/connector closures • Pedestrian and bicycle detours and facility closures • Traffic control improvements • Coordination with other projects • Project phasing • Traffic screens • Truck traffic restrictions • Haul routes

VISUAL AND AESTHETICS					
VIS-1	<p>Construction Plan. To keep construction and staging activities within the project right of way and to minimize views of construction access and staging areas, prior to the initiation of construction, the Riverside County Transportation Commission (RCTC) Project Engineer will require the Construction Contractor to document the locations of construction and staging areas within the disturbance footprint for the selected Mid County Parkway (MCP) Build Alternatives or within other public rights of way as approved by the local jurisdictions where those rights of way are located.</p>	RCTC Project Engineer	Prior to the initiation of construction		
	<p>During construction, the RCTC Project Engineer will require the Construction Contractor to construct the project in accordance with California Department of Transportation (Caltrans) Standard Construction Specifications, including measures included in those Specifications to address visual impacts during construction.</p>	RCTC Project Engineer	During construction		
VIS-2	<p>Construction Lighting. If construction work must be done at night, early evening, and/or early morning and lighting is required, RCTC's Project Engineer will require the Construction Contractor to properly locate and direct lighting within the construction area to minimize light shining off site during those nighttime construction activities.</p>	RCTC Project Engineer	During construction		
VIS-3	<p>MCP Corridor Master Plan. During final design, the RCTC Project Manager will have the <i>MCP Corridor Master Plan</i> (Master Plan) prepared. The Master Plan will include a design template for aesthetic features for structures throughout the MCP corridor. The purpose of the Master Plan is to create consistency in aesthetic design throughout the length of the MCP corridor. The aesthetic and design features described in Measure VIS-4 will be incorporated in the Master Plan. In addition, the Master Plan will be developed in conjunction with the <i>MCP Landscape Plan</i> described in Measure VIS-5.</p> <p>The RCTC Project Manager will coordinate the preparation of the Master Plan with the County of Riverside (County) and the cities in which the project is located, and with Caltrans in the context-sensitive design process for the Master Plan.</p> <p>During final design, the RCTC Project Manager will incorporate the Master Plan in the project specifications.</p>	RCTC Project Manager	During final design		
	<p>During construction, the RCTC Project Engineer will require the Construction Contractor to implement the Master Plan in the construction of the project hardscape and landscape features.</p>	RCTC Project Engineer	During construction		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
VIS-4	<p>Structural and Hardscape Elements. To address the adverse visual impacts of project structures, the RCTC Project Engineer will ensure that the final project design incorporates the mitigation and minimization elements A–D, below, and that these enhancements to structures are incorporated in the design and construction of sound walls, retaining walls, and bridge elements. The design of these aesthetic features will be based on the Master Plan described in Measure VIS-3.</p>	RCTC Project Engineer	During final design		
	<p>During construction, RCTC’s Project Engineer will ensure that the Construction Contractor constructs the retaining and sound walls, medians, bridges, and other structures and hardscape consistent with aesthetic and design features in the project specifications including the Master Plan.</p>	RCTC Project Engineer	During construction		
	<p>A. Sound walls will include attractive, decorative elements such as local art or local or historical references incorporated into the wall design to reduce visual impacts to community character, increase the visual quality of the area, and provide an expression of the local and/or regional “sense of place.” Areas in front of sound walls (the side facing away from the freeway) will be landscaped, where landscaping can be accommodated within the public right of way, including trees, shrubs, and vines.</p>	RCTC Project Engineer	During construction		
	<p>B. Retaining walls (including walls associated with bridge structures) will be heavily textured (i.e., split-face or fractured rib) to minimize glare and visual mass. Retaining walls facing public use areas (parks, streets, etc.) over 9 feet (ft) high will be heavily textured (i.e., split-face or fractured rib) and include site-specific aesthetic features (local or historical references). Color (integral or applied) is not required for retaining walls.</p>	RCTC Project Engineer	During construction		
	<p>C. In addition to texture and color as described in A and B, above, sound walls and retaining walls with low-density development or recreational viewer groups will include planting of trees or trees and shrubs at the base of the walls (non-motorist side) to minimize loss of visual unity. Plantings will be local native species or ornamental species that require no irrigation after establishment consistent with the <i>MCP Landscape Plan</i>. These plantings will not require permanent irrigation.</p>	RCTC Project Engineer	During construction		
<p>D. Slope paving in all areas with bicyclist and pedestrian viewers will include texture (i.e., stamped slate). In urban areas, slope paving will incorporate site-specific aesthetic features in addition to texture. Texture and pattern will be used to minimize the visual impacts of increased hard surface, and reinforce community identity, offsetting reduced community connectivity associated with increased bridge widths.</p>	RCTC Project Engineer	During construction			

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	In addition to the design elements noted above, the RCTC Project Engineer will ensure that the designs of sound walls comply with the Caltrans standards for sound attenuation (where walls provide that function), safety requirements, and with the Caltrans <i>Highway Design Manual</i> standards.	RCTC Project Engineer	During final design		
	The RCTC Project Engineer will request the Caltrans District 8 Landscape Architect to review and approve the final design of any sound walls within state highway right of way.	RCTC Project Engineer and Caltrans District 8 Landscape Architect	During final design		
VIS-5	<p>MCP Landscape Plan. During final design, the RCTC Project Manager will contract with a licensed landscape architect to prepare the <i>MCP Landscape Plan</i>. The purpose of the <i>MCP Landscape Plan</i> is to create consistency in the landscaping and softscape project features throughout the length of the MCP corridor. The <i>MCP Landscape Plan</i> will be developed in conjunction with the Master Plan described in Measure VIS-3, and landscaping will be in compliance with the Multiple Species Habitat Conservation Plan (MSHCP) Urban/Wildlands Interface Guidelines.</p> <p>The RCTC Project Manager will coordinate the preparation of the plan with the County and the cities in which the project is located, and with Caltrans.</p>	RCTC Project Manager	During final design		
	The RCTC Project Manager will submit the <i>MCP Landscape Plan</i> for review and approval by the Caltrans District 8 Landscape Architect for the parts of the <i>MCP Landscape Plan</i> applicable to state highway right of way.	RCTC Project Manager and the Caltrans District 8 Landscape Architect	During final design		
	The RCTC Project Manager will incorporate the <i>MCP Landscape Plan</i> in the project specifications.	RCTC Project Manager	During final design		
	<p>The <i>MCP Landscape Plan</i> will include the following components:</p> <ul style="list-style-type: none"> - Applicable procedures and requirements detailed in the Caltrans <i>Highway Design Manual</i>, Section 902.1, Planting Guidelines (September 2006), and any applicable local agency General Plan. - Identification of areas within the project limits for revegetation, including landscaping for graded areas with plant species consistent with adjacent vegetation and enhancement of new project structures (ramps, sound walls, and retaining walls). 	RCTC Project Manager and the Caltrans District 8 Landscape Architect	During final design		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	<ul style="list-style-type: none"> - Identification of trees and shrubs and their locations for planting along the MCP corridor and at interchanges to enhance the existing visual planting character of the area. - Identification of drought-resistant plants and their locations for planting along the MCP corridor; the plant materials will be consistent with Metropolitan Water District of Southern California (Metropolitan) guidelines, which promote the use of xeric (adapted to arid conditions) landscaping techniques. The irrigation design and implementation practices will conform to the water conservation measures established in Assembly Bill 325, the Water Conservation in Landscaping Act of 1990 (in effect January 1, 1993). The identified plant materials will also be durable in relation to urban pollutants, such as smog. - Identification of soil erosion control plant materials (groundcover, native grasses, and wildflowers) and the embankments and steeper slopes where those plant materials would be planted. - Identification of plant materials, which are not highly sensitive to shadow and shade, and their locations for planting along the walls of the MCP corridor. - Confirmation that all plantings will be drought-resistant and, where applicable, shadow-resistant to ensure plant longevity and the sustainable use of water resources. - Identification of locations along the MCP corridor where slope rounding and contour grading would be incorporated to minimize the appearance of slopes and visually soften grade changes in those areas. 				
	<p>During final design, the RCTC Project Manager will incorporate the <i>MCP Landscape Plan</i> in the project specifications.</p>	RCTC Project Manager	During final design		
	<p>During construction, the RCTC Resident Engineer will require the construction contractor to implement the <i>MCP Landscape Plan</i> in the construction of the project landscape features.</p>	RCTC Resident Engineer	During construction		
	<p>Replacement planting will include no less than 3 years of plant establishment.</p>	RCTC Project Manager	3 years after construction

CULTURAL RESOURCES					
CUL-1	Discovery of Cultural Materials. If cultural materials are discovered during construction, all earth-moving activity within and around the immediate discovery area will be diverted until a qualified archaeologist can assess the nature and significance of the find.	RCTC Project Engineer	During construction		
CUL-2	Discovery of Human Remains. If human remains are discovered, State Health and Safety Code Section 7050.5 states that further disturbances and activities shall cease in any area or nearby area suspected to overlie remains, and the County Coroner contacted. Pursuant to Public Resources Code (PRC) Section 5097.98, if the remains are thought to be Native American, the Coroner will notify the Native American Heritage Commission (NAHC) who will then notify the Most Likely Descendent (MLD). At this time, the person who discovered the remains will contact the Riverside County Transportation Commission (RCTC) Project Manager and the Caltrans District 8 Environmental Branch Chief so that they may work with the MLD on the respectful treatment and disposition of the remains. Further provisions of PRC 5097.98 are to be followed as applicable.	RCTC Project Engineer and Construction Contractor	During construction		
CUL-3	Avoidance of Site 33-3653. During the final design the RCTC's Project Engineer will designate the part of Site 33-3653 near the project Area of Potential Effects (APE) as an Environmentally Sensitive Area on the project construction plans. The boundary of that site near the APE will be mapped by the Project Archaeologist (to be retained by the RCTC Project Manager) for incorporation in the final design mapping. The Environmentally Sensitive Area for Site 33-3653 will not be shown as a cultural site on the final design plans to avoid unauthorized artifact collection or vandalism to the site.	RCTC Project Engineer	During final design		
	Prior to any ground-disturbing activities in the vicinity of Site 33-3653, RCTC's Project Engineer will require the Construction Contractor to provide fencing or flags around the boundary of the Environmentally Sensitive Area. The Project Archaeologist will monitor the installation of the fencing/flagging.	RCTC Project Engineer	Prior to any ground-disturbing activities		
	The area in the project disturbance limits near or adjacent to the Environmentally Sensitive Area boundary will be monitored when construction in the MCP APE is adjacent to the site by the Project Archaeologist and a Native American monitor during all ground-disturbing and construction activities in this area.	RCTC Project Engineer	During construction		
	The RCTC Project Engineer will require the Construction Contractor to maintain the fencing/flagging throughout the entire construction period in this area. The Project Archaeologist will monitor the condition of the fencing/flagging monthly and will report the need for any repairs to that material to the RCTC Project Engineer and the Construction Contractor.	RCTC Project Engineer	During construction

	The RCTC Resident Engineer will not authorize the Construction Contractor to begin construction activities until a Waste Discharger Identification number is received from the Storm Water Multi-Application and Report Tracking System.	RCTC Resident Engineer	Prior to the initiation of site preparation, grading, excavation, or construction activities		
	The RCTC Resident Engineer will require the Construction Contractor to prepare the SWPPP and will require the SWPPP to be prepared by a Qualified SWPPP Developer. The RCTC Resident Engineer will require the SWPPP to meet the requirements of the Construction General Permit; to identify potential pollutant sources associated with construction activities; identify non-storm water discharges; develop a water quality monitoring and sampling plan; and identify, implement, and maintain Best Management Practices (BMPs) to reduce or eliminate pollutants associated with the construction site. Those BMPs will include, but not be limited to, Good Housekeeping, Erosion Control, and Sediment Control BMPs.	RCTC Resident Engineer	Prior to the initiation of site preparation, grading, excavation, or construction activities		
	The RCTC Resident Engineer will require the Construction Contractor to implement the BMPs identified in the SWPPP during site preparation, grading excavation, construction, and site restoration activities, consistent with how, when, and where the SWPPP indicates those BMPs should be implemented.	RCTC Resident Engineer	During all site preparation, grading, excavation, construction, and site restoration activities		
	The RCTC Resident Engineer will require the Construction Contractor to comply with the sampling and reporting requirements of the Construction General Permit.	RCTC Resident Engineer	During all site preparation, grading, excavation, construction, and site restoration activities		
	The RCTC Resident Engineer will require the Construction Contractor to have a Rain Event Action Plan prepared by a Qualified SWPPP Developer prior to the initiation of site preparation, grading, excavation, or construction activities. The RCTC Resident Engineer will require the Construction Contractor to have the Rain Event Action Plan implemented by a Qualified SWPPP Developer within 48 hours prior to a rain event of 50 percent or greater probability of precipitation according to the National Oceanic and Atmospheric Administration.	RCTC Resident Engineer and the Qualified SWPPP Developer	During all site preparation, grading, excavation, construction, and site restoration activities		
	The RCTC Resident Engineer will require the Construction Contractor to prepare and submit an Annual Report to the State Water Resources Control Board (SWRCB) no later than September 1 of each year using the Storm Water Multi-Application and Report Tracking System.	RCTC Resident Engineer	By September 1 during project construction		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	The RCTC Resident Engineer will submit a Notice of Termination to the SWRCB within 90 days of completion of construction and stabilization of the site.	RCTC Resident Engineer	Within 90 days of the completion of construction		
WQ-2	National Pollutant Discharge Elimination System CAG998001. The RCTC Resident Engineer will require the Construction Contractor to comply with the provisions of the <i>General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimus) Threat to Water Quality</i> , Order No. R8-2009-0003 National Pollutant Discharge Elimination System (NPDES) No. CAG998001, as they relate to discharge of non-storm water dewatering wastes for the project.	RCTC Resident Engineer	During all site preparation, grading, excavation, construction, and site restoration activities		
	The RCTC Resident Engineer will require the Construction Contractor to submit to the Santa Ana Regional Water Quality Control Board (RWQCB) a Notice of Intent at least 60 days prior to the start of construction.	RCTC Resident Engineer	At least 60 days prior to any site preparation, grading, excavation, construction, and site restoration activities		
	The RCTC Resident Engineer will require the Construction Contractor to submit to the Santa Ana RWQCB notification of discharge at least 5 days prior to any planned discharges.	RCTC Resident Engineer	At least 5 days prior to any planned discharges during site preparation, grading, excavation, construction, and site restoration activities		
	The RCTC Resident Engineer will require the Construction Contractor to submit to the Santa Ana RWQCB monitoring reports by the 30th day of each month following the monitoring period.	RCTC Resident Engineer	During site preparation, grading, excavation, construction, and site restoration activities		
WQ-3	Design Pollution Prevention and Treatment Best Management Practices. Riverside County Transportation Commission (RCTC) will comply with the <i>Storm Water Management Plan (SWMP)</i> and follow the procedures outlined in the <i>Storm Water Quality Handbooks, Project Planning and Design Guide</i> for implementing Design Pollution Prevention and Treatment BMPs for the project that address pollutants of concern. This will include coordination with the Santa Ana RWQCB with respect to feasibility, maintenance, and monitoring of Treatment BMPs as set forth in the Caltrans Statewide SWMP.	RCTC Project Engineer	Prior to construction		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
WQ-4	<p>Groundwater Wells. During final design, the RCTC will conduct a detailed review of available well information to locate existing active groundwater wells within the MCP project right of way and coordinate with affected property owners of each well to determine if the well requires relocations. The abandonment procedure for each well will be described in accordance with California Department of Water Resources Standards (Bulletin 74-90), and the abandonment approvals by the agencies with jurisdiction for those wells will be documented.</p> <p>Any water supply provided by active wells will be replaced by RCTC during construction of the MCP project. Replacement water may be provided by a variety of means, such as installing a new well or by creating a connection to a municipal supply.</p>	RCTC Project Engineer	During final design		
GEOLOGY, SOILS, SEISMIC, AND TOPOGRAPHY					
GEO-1	<p>Final Geotechnical Report. During final design, the Riverside County Transportation Commission (RCTC) will contract with a qualified geotechnical/geologic engineer to prepare the Final Geotechnical Report. This report will build on the information in the Preliminary Geotechnical Report, focusing the analysis on potential geotechnical constraints to the selected build alternative and the specific design features included in the final engineering to address those constraints. The Preliminary Geotechnical Report identified soil-related constraints and hazards, such as slope instability, settlement, liquefaction, or related secondary seismic impacts, that may affect the project. The detailed analysis in the Final Geotechnical Report will address those constraints along the entire alignment of the selected alternative with appropriate design features addressing those constraints included in the final project design.</p> <p>The report will specifically include:</p> <ul style="list-style-type: none"> • Evaluation of expansive soils along the selected alignment and recommendations regarding construction procedures and/or incorporation of design criteria in the final design to minimize the effect of these soils on the project. • Identification of potential liquefiable areas within the project limits and recommendations and/or design criteria to minimize the effect of liquefaction on the project. • Demonstration that side slopes can be designed and graded so that surface erosion of the engineered fill will not be increased compared to existing, natural conditions. • The performance standards for this report will be the geotechnical design 	RCTC Project Engineer	During final design		

Environmental Commitments Record

	standards of the California Department of Transportation (Caltrans) and the local agencies with jurisdiction over the Mid County Parkway (MCP) project right of way. Acceptance of this report will be needed from the local agencies with jurisdiction over the MCP project right of way and Caltrans for the parts of the MCP project within State highway right of way.				
GEO-2	Vegetation. During construction, and as included on project plans during final design, the RCTC will require planting of native vegetation with good soil-binding characteristics and low water requirements on engineered slopes to reduce erosion and slope instability. These types of plants include species that are compatible with existing adjacent habitat and native to the project area, including but not limited to the following: brittlebush (<i>California encelia</i>), California buckwheat (<i>Eriogonum fasciculatum</i>), California sagebrush (<i>Artemisia californica</i>), and deerweed (<i>Lotus scoparius</i>). Sixty percent of the planting coverage shall be completed within the first 5 years of construction.	RCTC Resident Engineer	During construction, and as included on project plans during final design		
GEO-3	Quality Assurance/Quality Control Plan. The RCTC will maintain a quality assurance/quality control (QA/QC) plan during construction. The plan will include observing, monitoring, and testing by a geotechnical engineer and/or geologist during construction to confirm that geotechnical/geologic recommendations identified in Measure GEO-1 are fulfilled, or if different site conditions are encountered, appropriate changes are made to accommodate such issues. During site preparation, grading, excavation, and construction, the geotechnical engineer will submit weekly reports to the RCTC Resident Engineer describing that week's activities and the compliance with the relevant recommendations from GEO-1.	RCTC Resident Engineer	During site preparation, grading, excavation, and construction		
GEO-4	Blasting. During final design, if it is determined that blasting will be required, the RCTC Project Engineer shall require the Construction Contractor to prepare a blasting plan to minimize potential hazards related to blasting activities. The blasting plan will address all applicable standards in accordance with the United States Department of the Interior, Office of Surface Mining. The issues to be addressed in the blasting plan will include, but are not limited to, the following: hours of blasting activity, notification to adjacent property owners, noise and vibration, and dust control.	RCTC Project Engineer	During final design		
	RCTC's Resident Engineer shall require the Construction Contractor to implement the blasting plan prior to and during any blasting during construction.	RCTC Resident Engineer	Prior to and during any blasting

PALEONTOLOGY					
PAL-1	<p>Paleontological Mitigation Plan. During final design, the Riverside County Transportation Commission (RCTC) Project Engineer will require the qualified principal paleontologist under contract to RCTC to prepare a <i>Paleontological Mitigation Plan</i> (PMP). The PMP will provide guidance for developing and implementing paleontological mitigation efforts, including field work, laboratory methods, and curation during construction of the Mid County Parkway (MCP) project. The PMP will primarily be prepared following the guidelines in the California Department of Transportation (Caltrans) <i>Standard Environmental Reference</i> (SER), Environmental Handbook, Volume I, Chapter 8 – Paleontology. In addition, the PMP will be prepared following guidance from the General Plan of the County of Riverside, and the guidelines of the Society of Vertebrate Paleontology. The PMP will be specifically tailored to the resources and sedimentary formations that are within the project disturbance limits.</p> <p>The PMP will include, but not be limited to, the following to reduce impacts to paleontological resources from ground-disturbing activities associated with the construction of the project:</p> <ul style="list-style-type: none"> • Description of the responsibilities and qualifications of the qualified principal paleontologist and the qualified paleontological monitors (who are qualified to identify vertebrate, invertebrate, and plant fossils). • Description of the communication channels among the qualified principal paleontologist, the qualified paleontological monitors, the RCTC Project Manager and Engineer, and the Construction Contractor. • Development of a detailed Monitoring Plan for paleontological resource monitoring defining the specific monitoring requirements and procedures during all ground-disturbing and excavation activities in areas of High A and High B sensitivity. • Development of specific procedures for temporarily halting or redirecting work at an area of a discovery of paleontological resources to permit the present within the locality. • Development of a detailed plan for the recovery, analysis, identification, processing, and cataloguing of fossils recovered during ground-disturbing and excavation activities. 	RCTC Project Engineer	During final design		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	The activities in the PMP will be implemented as described in the following steps:				
	<ul style="list-style-type: none"> Prior to any ground-disturbing or excavation activities, the qualified principal paleontologist or his/her representative will participate in preconstruction and pregrading conferences with the RCTC Project Manager and Project Engineer, and the Construction Contractor. At this meeting, the qualified principal paleontologist, or his/her representative, will explain the likelihood for encountering paleontological resources during construction, what resources may be discovered, and the methods that will be employed to recover fossils if anything is discovered, consistent with the procedures established in the PMP. 	Qualified principal paleontologist	During the preconstruction and pregrading conferences		
	<ul style="list-style-type: none"> RCTC's Resident Engineer will require the Construction Contractor to comply with the provisions of the PMP during all ground-disturbance, grading, and excavation activities, including appropriate coordination with RCTC's qualified principal paleontologist. 	RCTC Resident Engineer	Prior to and during any ground disturbing or excavation activities		
	<ul style="list-style-type: none"> The curation facility should be identified prior to the beginning of excavation activities. At a minimum, a draft curation agreement should be in place between the curation facility, the land owner (RCTC), and the qualified principal paleontologist. This will ensure that collected resources have a permanent home and that the resources are prepared, identified, and cataloged following procedures acceptable to the curation facility. 	Qualified principal paleontologist	Prior to any ground disturbing or excavation activities		
	<ul style="list-style-type: none"> After vegetation, pavement, and structures are removed, the qualified principal paleontologist and/or qualified paleontological monitors will conduct a preconstruction field survey in areas identified as having high paleontological sensitivity. Observed surface paleontological resources in those areas will be collected by the qualified principal paleontologist, the qualified paleontological monitors, and/or other staff prior to the beginning of additional ground-disturbing activities in those areas. 	Qualified principal paleontologist	After vegetation, pavement, and structures are removed		
	<ul style="list-style-type: none"> A qualified paleontological monitor will be present during ground-disturbing and excavation activities within the project disturbance limits in potentially fossiliferous formations and/or geologic units crossed by the MCP project facilities as defined in the PMP. Consistent with the PMP, the monitoring for paleontological resources will be conducted on a full-time basis where fossiliferous sediments are exposed at the surface (High A) and at elevations where excavation is 3 feet (ft) below the surface where paleontological resources are anticipated at depth (High B). 	Qualified paleontological monitors	During any ground disturbing or excavation activities		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	<ul style="list-style-type: none"> Monitoring may be reduced to a part-time basis if no resources are being discovered in sediments with a high sensitivity rating. Any reduction or modification in scheduling of monitoring will be determined by the qualified principal paleontologist in cooperation and consultation with RCTC's Resident Engineer. 	Qualified principal paleontologist and the RCTC Resident Engineer	During any ground disturbing or excavation activities		
	<ul style="list-style-type: none"> If paleontological resources are discovered during ground-disturbing and excavation activities, the qualified principal paleontologist shall implement the appropriate actions consistent with the PMP and in cooperation with the RCTC Resident Engineer, for recovery and collection of the fossil resources. 	Qualified principal paleontologist, and the RCTC Resident Engineer	During any ground disturbing or excavation activities		
	<ul style="list-style-type: none"> The qualified principal paleontologist and qualified paleontological monitors will be empowered to temporarily halt or redirect construction activities around a discovery to reduce adverse impacts to paleontological resources by allowing for the collection of individual or multiple paleontological resources at the paleontological locality. The qualified principal paleontologist and qualified paleontological monitors will be equipped to rapidly remove any large or small fossil specimens encountered during excavation to locations away from the active construction areas to either a safe area within the overall project disturbance limits or an off-site laboratory setting. If large mammal fossils or large concentrations of fossils are encountered, RCTC's Resident Engineer will require the Construction Contractor to make heavy equipment available to assist in the removal and collection of those larger materials. The use of heavy equipment will speed up the recovery and collection process and reduce delays to construction activities. 	Qualified principal paleontologist, the qualified paleontological monitors, and the RCTC Resident Engineer	When fossil discoveries are made during ground disturbing or excavation activities		
	<ul style="list-style-type: none"> Upon encountering a large deposit of fossils, the monitor will attempt to salvage all identifiable vertebrate fossils, and a representative sample of invertebrate fossils using additional field staff, if required. Collection of specimens will be completed in accordance with modern paleontological techniques. If the deposit extends outside the work area, or deeper into the ground than any proposed excavation, detailed notes, sketches, and photographs may be taken in lieu of further attempts to collect fossil resources that would be outside the project limits or excavation conditions. 	Qualified principal paleontologist	When fossil discoveries are made during ground disturbing or excavation activities		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	<ul style="list-style-type: none"> For each newly discovered fossil locality, the qualified principal paleontologist shall submit a brief summary report to RCTC that describes an initial analysis of the discovery such as preliminary identification of the fossil specimen(s), the location within the project limits, the geologic formation or unit in which the fossil is located, and if the discovery resulted in a delay to the project construction. If an abundant number of fossil localities are discovered over 1 week, this report may be prepared on a weekly basis with a summary that includes all localities discovered over that weekly period. 	Qualified principal paleontologist	When fossil discoveries are made during ground disturbing or excavation activities		
	<ul style="list-style-type: none"> During monitoring of the ground-disturbing and excavation activities, sediment samples will be collected and processed through screens to recover microvertebrate fossils by the qualified paleontological monitors, as described in detail in the PMP. This processing will include either dry or wet screen washing and microscopic examination of the residual matrix to recover and identify any small vertebrate remains that may be present. 	Qualified principal paleontologist	During any ground disturbing or excavation activities		
	<ul style="list-style-type: none"> All fossils collected will be prepared to a reasonable point of identification by qualified paleontologists. Excess sediment or matrix will be removed from the specimens to reduce the bulk of the material. An itemized inventory/catalog of all material collected and identified will be prepared using an Excel or Access type database in a format acceptable to the repository institution. 	Qualified principal paleontologists	During and after grading and excavation activities		
	<ul style="list-style-type: none"> A <i>Paleontological Mitigation Report</i> (PMR), which documents the results of the monitoring and recovery activities and the significance of the recovered fossils, will be prepared by the qualified principal paleontologist and submitted for filing at RCTC and Caltrans within 4 months of the end of project construction activities that could potentially impact fossiliferous formations or geologic units. The PMR will follow the report guidelines in the Caltrans SER, Environmental Handbook, Volume I, Chapter 8 -Paleontology. Additional time may be required to prepare the PMR if an abundant number of paleontological resources are collected that require an additional amount of time for curation and analysis. 	Qualified principal paleontologist	Within 4 months of the end of project construction activities that could potentially impact fossiliferous formations or geologic units		
	<ul style="list-style-type: none"> The RCTC Project Manager and the qualified principal paleontologist will transfer all the collected fossils, the itemized inventory/catalog of those specimens, and a copy of the PMP to an established repository (Society of Vertebrate Paleontology, 1995 and 1996), such as the Western Science Center in Hemet, for permanent curation and storage. 	RCTC Project Manager and the qualified principal paleontologist	At the completion of all documentation for the fossils collected during construction

HAZARDOUS WASTE AND MATERIALS					
HW-1	<p>Site Investigations. During final design, the Riverside County Transportation Commission (RCTC) Project Manager will require a qualified engineer/geologist (Contract Qualified Engineer/Geologist) under contract to RCTC to conduct site investigations for hazardous materials sites identified in the <i>Hazardous Waste Initial Site Assessment</i> (July 2011) that are within the right of way of the alternative selected for implementation.</p> <p>It is not feasible to conduct these site investigations prior to completion of the Final Environmental Impact Report/Environmental Impact Statement (EIR/EIS), because new contamination may occur if the site investigations are completed too far in advance of right of way acquisition for the project.</p> <p>The performance standard for this measure is compliance with applicable federal, state, and local regulations. The Site Investigation Report will meet or exceed the requirements of the United States Environmental Protection Agency's (EPA) Standards and Practices for All Appropriate Inquiries (FR 66070, Vol. 70, No. 210, November 1, 2005).</p> <p>The Site Investigation Report will be submitted to the California Department of Transportation (Caltrans) District 8 Hazardous Waste Coordinator for review and approval of areas within state right of way.</p>	RCTC Project Manager	During final design		
	<p>If contaminants are determined to be present during the site investigations, the RCTC Project Manager, in consultation with the Contract Qualified Engineer/Geologist, may determine that one or more of the following specialized reports may be necessary: Remedial Actions Options Report, Sensitive Receptor Survey, Human Health/Ecological Risk Assessment, and/or Quarterly Monitoring Report.</p> <p>These reports will be submitted to the Caltrans District 8 Hazardous Waste Coordinator, as well as to the applicable oversight agency for review and approval of areas within state right of way.</p>	RCTC Project Manager	During final design		
	<p>The RCTC Project Manager will require the Contract Qualified Engineer/Geologist to coordinate all site investigations for any active leaking underground storage tank (LUST) cases will be coordinated with the Riverside County Department of Environmental Health, and if groundwater has been impacted, to also coordinate with the Regional Water Quality Control Board (RWQCB), Santa Ana Region.</p>	RCTC Project Manager	During final design		

Environmental Commitments Record

	<p>The RCTC Project Manager will require the Contract Qualified Engineer/Geologist to coordinate all site investigations for any automotive or industrial uses to be coordinated with the Riverside County Department of Environmental Health. Site investigations for any clandestine drug lab locations will be coordinated with the Riverside County Department of Environmental Health, the California Department of Toxic Substances Control (DTSC), and law enforcement agency/ies with jurisdiction in the area of the suspected drug lab.</p>	RCTC Project Manager	During final design		
	<p>Prior to completion of final design, the RCTC Project Manager will require the Contract Qualified Engineer/Geologist to prepare a Hazardous Substances Disclosure Document that clears affected right of way for acquisition. The RCTC Project Manager will submit the Hazardous Substances Disclosure Document to the Caltrans District 8 Hazardous Waste Coordinator for review and approval.</p>	RCTC Project Manager	During final design		
HW-2	<p>Soil Sampling. Prior to any site preparation, disturbance, grading, and construction, the RCTC Project Manager will require a qualified engineer/geologist (Contract Qualified Engineer/Geologist) under contract to RCTC to conduct soil sampling for aerially deposited lead (ADL) in unpaved locations adjacent to existing state highway right of way within the project limits, if not previously tested.</p> <p>It is not prudent to conduct this soil sampling prior to completion of the Final EIR/EIS because a preferred alternative has not been selected.</p> <p>The performance standard for this measure is compliance with applicable federal, state, and local regulations related to the identification, removal, handling, and disposal of ADL. The analytical results of the soil sampling will determine the appropriate handling of the soil in those areas and disposal of surplus materials.</p>	RCTC Project Manager	Prior to initiation of right of way acquisition		
	<p>During site preparation, grading, excavation, and construction, the RCTC Resident Engineer will allow the Construction Contractor to use soil containing ADL within the Caltrans right of way in accordance with the California Environmental Protection Agency, DTSC, Variance No. 00-H-VAR-04, September 22, 2000, or a subsequent applicable variance. The RCTC Resident Engineer will require the Construction Contractor to provide written documentation regarding where the soil with ADL was removed from and where it was reused.</p>	RCTC Resident Engineer	During site preparation, grading, excavation, and construction		
	<p>During site preparation, grading, excavation, and construction, if it is determined by the RCTC Resident Engineer that it is not feasible to reuse soils, and that soils with ADL will require disposal off-site, the RCTC Resident Engineer will require the Construction Contractor to consolidate the material, load it into approved covered vehicles or</p>	RCTC Resident Engineer	During site preparation, grading, excavation, and construction

	containers, and transport it to a permitted hazardous waste disposal facility (Class I or II). The RCTC Resident Engineer will require the Construction Contractor to conduct the soil removal and transport consistent with the Caltrans Standard Special Provision XE 19-900, which includes additional information on the disposal of soils impacted with ADL.				
HW-3	Asbestos, Lead-Based Paint, and Polychlorinated Biphenyl Surveys. Prior to any site preparation, disturbance, and construction, the RCTC Resident Engineer will require a certified consultant under contract to RCTC to conduct predemolition asbestos, lead-based paint, and polychlorinated biphenyl (PCB) surveys of any structures that will be renovated or demolished.	RCTC Resident Engineer and the Certified Consultant	Prior to any site disturbance, and construction		
	Based on the results of the testing conducted by the certified consultant and prior to the demolition or renovation of any structures determined to contain hazardous materials that exceed the California Health and Safety Code criteria for hazardous waste, the RCTC Resident Engineer will require the Construction Contractor to properly remove, store, transport and dispose of (at an appropriate Class I or II facility) any building materials that exceed the California Health and Safety Code criteria for hazardous waste.	RCTC Resident Engineer and the Certified Consultant	Prior to the demolition or renovation of any structures determined to contain hazardous materials that exceed the Health and Safety Code criteria		
HW-4	Utility Inspections. Prior to any site preparation, disturbance, grading, and construction, the RCTC Resident Engineer will require a qualified consultant (Contract Qualified Consultant) under contract to RCTC to conduct inspections of utility pole-mounted transformers that will be relocated or removed as part of the project. Any identified leaking transformers will be considered a PCB hazard unless tested and confirmed otherwise by the Contract Qualified Consultant. For any confirmed PCBs, the RCTC Resident Engineer will require the Construction Contractor to remove, handle, store, and dispose of them and any affected soils consistent with applicable laws and regulations.	RCTC Resident Engineer	Prior to site preparation, disturbance, grading, and construction		
HW-5	Yellow Traffic Stripe and Pavement Markings. Prior to any site preparation, disturbance, grading, and construction, the RCTC Resident Engineer will require the Construction Contractor to test and remove any yellow traffic striping and pavement-marking material in accordance with Caltrans Standard Special Provisions.	RCTC Resident Engineer	Prior to site preparation, disturbance, grading, and construction		
	During site preparation, disturbance, and construction, the RCTC Resident Engineer will require the Construction Contractor to remove yellow traffic striping and pavement-marking material in accordance with Caltrans Standard Special Provisions. HW-8	<p>Soil Sampling adjacent to the Burlington Northern Santa Fe Railway Company Right of Way. During final design, the RCTC Project Engineer will require a qualified consultant (Contract Qualified Consultant) under contract to the RCTC to sample soils adjacent to the Burlington Northern Santa Fe (BNSF) railroad tracks that will be disturbed during construction of the project for petroleum hydrocarbons, metals, solvents, and other potential contaminants to determine whether they require special handling and disposal. Soils exceeding California Health and Safety Code criteria for hazardous waste will be disposed of at the appropriate Class I or II facility.</p> <p>Based on the results of that sampling, prior to the disturbance of any soils in areas documented as containing contaminants that exceed the California Health and Safety Code criteria for hazardous waste, the RCTC Resident Engineer will require the Construction Contractor to properly remove, store, transport and dispose of (at an appropriate Class I or II facility) any soils that exceed the California Health and Safety Code criteria for hazardous waste.</p>	RCTC Project Engineer	Prior to the disturbance of any soils in areas documented as containing contaminants that exceed the Health and Safety Code criteria		
HW-9	<p>Soil Sampling for Pesticides. Prior to completion of right of way acquisitions, the RCTC Project Engineer will require a qualified consultant (Contract Qualified Consultant) under contract to the RCTC to conduct soil sampling for pesticides in former or current agricultural properties that will be disturbed by the project where soil has not otherwise been disturbed (through grading, etc.).</p> <p>It is not prudent to conduct these site investigations prior to completion of the Final EIR/EIS, because new contamination may occur if the investigations are completed too far in advance of right of way acquisitions. The performance standard for this measure is in compliance with applicable federal, state, and local regulations. The analytical results of the soil sampling will determine the appropriate handling and disposal of the soil. Sampling will be conducted in general accordance with DTSC Interim Guidance for Sampling Agricultural Fields for School Sites (August 26, 2002).</p>	RCTC Project Engineer	Prior to completion of right of way acquisition		
HW-10	<p>Caltrans Unknown Hazards Procedures for Construction. During site preparation, disturbance, grading, excavation, and construction, if suspect hazardous waste or underground tanks are encountered, the RCTC Resident Engineer will require the Construction Contractor to stop work in the affected area and implement the procedures outlined in Appendix E of the Caltrans Construction Manual, <i>Unknown Hazards Procedures for Construction</i>.</p>	RCTC Resident Engineer	During site preparation, disturbance, grading, excavation, and construction		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
HW-11	<p>Health and Safety Plan. Prior to any site preparation, disturbance, grading, and construction, the RCTC Resident Engineer will require the Construction Contractor to prepare a site-specific Health and Safety Plan consistent with Caltrans and applicable regulatory requirements that were prepared by the Construction Contractor. The Plan will include, but not be limited to, the following:</p> <ul style="list-style-type: none"> • Identification of key personnel • Summary of risk assessment for workers, the community, and the environment • Air Monitoring Plan • Emergency Response Plan <p>The RCTC Resident Engineer must review and approve the Plan prior to the Construction Contractor accessing any project construction areas.</p>	RCTC Resident Engineer	Prior to any site preparation, disturbance, grading, and construction		
HW-12	<p>Underground Transmission Lines. No less than 2 days prior to any subsurface excavation or digging, the RCTC Resident Engineer will require the Construction Contractor to notify and ensure that utility owners mark the locations of underground transmission lines and facilities by calling the Underground Service Alert of Southern California at 811.</p>	RCTC Resident Engineer	No less than two days prior to any subsurface excavation or digging		
HW-13	<p>Blasting. Prior to any rock-blasting activities, the RCTC Resident Engineer will require the Construction Contractor to obtain a blasting permit from the County of Riverside (County) Sheriff's Department. As part of the permit requirements and pursuant to County requirements, the RCTC Resident Engineer will require the Construction Contractor to comply with the following requirements:</p> <ul style="list-style-type: none"> • Transportation, handling, storage, and use of explosives, blasting agents, and blasting equipment will be directed and supervised by a qualified Blast Officer, in accordance with local, state, and federal regulations. The Blast Officer will possess a current blasting license issued by the California Occupational Safety Administration (Cal-OSHA). • Allow the appropriate fire protection district and Sheriff's Department personnel to inspect the blast site and blast materials or explosives at any reasonable time. • Give reasonable notice in writing using a form approved by the Sheriff's Department for ongoing operations to all residences and businesses within the blast area. • Implement adequate precautions to reasonably safeguard persons and property before, during, and after blasting operations. 	RCTC Resident Engineer	Prior to any rock-blasting activities

AIR QUALITY					
AQ-1	<p>Fugitive Dust Source Controls. During all site preparation, grading, excavation, and construction, the Riverside County Transportation Commission (RCTC) will require the Construction Contractor to:</p> <ul style="list-style-type: none"> • Stabilize open storage piles and disturbed areas by covering them and/or applying water or chemical/organic dust palliative to the disturbed surfaces. This applies to inactive and active sites during workdays, weekends, holidays, and windy conditions. • Install wind fencing, phase grading operations, and operate water trucks for stabilization of surfaces under windy conditions. • Limit vehicle speeds to 15 miles per hour (mph) within the project limits. • Cover loads when hauling material to prevent spillage. • Limit speed of earthmoving equipment to 10 mph. 	RCTC Resident Engineer	During all site preparation, grading, excavation, and construction		
AQ-2	<p>Mobile and Stationary Source Controls. During all site preparation, grading, excavation, and construction, the RCTC Resident Engineer will require the Construction Contractor to:</p> <ul style="list-style-type: none"> • Reduce the use of trips by and unnecessary idling from heavy equipment. • Use solar-powered, instead of diesel-powered, changeable message signs. • Use electricity from power poles, rather than from generators, when electricity can be acquired from existing power poles in proximity to the construction areas. • Maintain and tune engines per manufacturers' specifications to perform at United States Environmental Protection Agency (EPA) certification levels and verified standards applicable to retrofit technologies. The RCTC Resident Engineer will conduct periodic, unscheduled inspections to ensure that there is no unnecessary idling and that construction equipment is properly maintained, tuned, and modified consistent with established specifications. • Prohibit any tampering with engines and require continuing adherence to manufacturers' recommendations. • Use new, clean (diesel or retrofitted diesel) equipment meeting the most stringent applicable federal or state standards and commit to the best available emissions control technology. Use Tier 2, or higher, engines for construction equipment. If nonroad construction equipment that meets or exceeds Tier 2 engine standards is not available, the Construction Contractor will be required to use the best available emissions control technologies on all equipment. 	RCTC Resident Engineer	During all site preparation, grading, excavation, and construction

NOISE					
N-1	<p>Sound Barriers. Based on the studies completed to date, the Riverside County Transportation Commission (RCTC) intends to incorporate noise abatement in the form of reasonable and feasible barriers at four to six locations, depending on the selected alternative, with respective lengths, and ranging in height from 6 feet (ft) to 14 ft (see Table 3.15.AB), depending on the alternative and the design variations. Calculations based on preliminary design data indicate that the barriers will reduce noise levels by 5 to 11 A-weighted decibels (dBA) (satisfying the 7 decibels [dB] or more for at least one of the benefited receptor locations based on the <i>Traffic Noise Analysis Protocol for New Highway Construction and Reconstruction Projects</i> (Protocol; May 2011) for 136 to 243 residences, depending on the design variation.</p> <p>During final design, the RCTC Project Manager and Project Engineer, in consultation with the California Department of Transportation (Caltrans), will make the final decision on noise abatement to be included in the selected Build Alternative, based on the final design of the highway facilities and the public involvement process for the environmental document. If during final design, conditions have substantially changed, noise abatement at some of the locations noted above may not be necessary. The Project Engineer will incorporate the final noise abatement in the final project design and specifications.</p>	RCTC Project Manager and Project Engineer	During final design		
	<p>During construction, RCTC's Resident Engineer will require the Construction Contractor to construct the noise abatement measures included in the final design and project specifications as early in the construction process as appropriate, based on other construction activities to maximize the reduction of construction noise on sensitive receptors on the non-freeway side of the wall.</p>	RCTC Resident Engineer	During construction		
N-2	<p>Construction Noise. During all site preparation, disturbance, grading, and construction, the RCTC Resident Engineer will require the Construction Contractor to control noise from construction activity consistent with the Caltrans Standard Specifications, Section 14-8.02, "Noise Control," and Standard Special Provisions S5-310. RCTC's Resident Engineer will require the Construction Contractor to ensure that noise levels from construction operations within the state right of way between the hours of 9:00 p.m. and 6:00 a.m. do not exceed 86 dBA at a distance of 50 ft from the noise source. The noise level requirement will apply to the equipment and activities on the job site or related to the job, including, but not limited to trucks, transit mixers, or transient equipment that may or may not be owned by the Construction Contractor.</p>	RCTC Resident Engineer	During all site preparation, disturbance, grading, and construction		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	<p>During all site preparation, disturbance, grading, and construction, RCTC's Resident Engineer will require the Construction Contractor to equip all internal combustion engines with the manufacturer-recommended mufflers and to not operate any internal combustion engine on the job site without the appropriate mufflers. As directed by RCTC's Resident Engineer, the Construction Contractor will implement additional minimization measures, including changing the location of stationary construction equipment, turning off idling equipment, rescheduling construction activity, notifying adjacent residents in advance of construction work, and installing acoustic barriers around stationary construction noise sources.</p>				
N-3	<p>Noise Ordinances. During all site preparation, disturbance, grading, and construction, in accordance with the Municipal Codes of the City of Perris and the City of San Jacinto, and the Riverside County Noise Ordinance, the RCTC Resident Engineer will require the Construction Contractor to limit construction activities to between the hours of 7:00 a.m. and 7:00 p.m., Monday through Friday, excluding weekends and holidays. If construction is needed outside those hours or days, the RCTC Resident Engineer will require the Construction Contractor to coordinate with the affected local jurisdiction.</p>	RCTC Resident Engineer	During all site preparation, disturbance, grading, and construction		
N-4	<p>Blasting. A minimum distance of 100 ft from potential blasting is required for the closest residence under Alternative 4 Modified.</p>	RCTC Resident Engineer	During any blasting activities under Alternative 4 Modified		
N-5	<p>Blasting. Prior to blasting, the Construction Contractor shall prepare crack survey and video reconnaissance, documenting the existing condition of surrounding structures within 100 ft. A follow-up crack survey and video reconnaissance of neighboring structures shall be conducted to determine whether any new cracks or other damage have occurred. The Resident Engineer shall review the results of both pre- and post-construction surveys to determine whether any new damage resulted from blasting.</p>	RCTC	Prior to blasting

ENERGY					
Mitigation Measures AQ-1 through AQ-5, discussed in Section 3.14 will reduce impacts related to increased energy consumption and global climate change.					
NATURAL COMMUNITIES					
NC-1	Project Biologist. Prior to the initiation of final design, the Riverside County Transportation Commission (RCTC) Project Manager will require the design contractor to have a Project Biologist under contract. The Project Biologist will ensure that all vegetation removal, seasonal restrictions, Best Management Practices (BMPs), environmentally sensitive areas, and all biological resources avoidance, minimization, and mitigation measures are properly included in the project design and specifications. Additional levels of biological monitors, such as qualified/authorized biologists for monitoring listed species, and general biological monitors, will also be used as needed to ensure that mitigation measures are properly implemented.	RCTC Project Manager	Prior to the initiation of final design		
NC-2	<p>Environmentally Sensitive Areas. During final design, the RCTC Project Manager, the Project Engineer, and the Project Biologist will coordinate with the Construction Contractor and the Project Biologist to ensure that all environmentally sensitive areas (ESAs) within the project footprint and the immediately surrounding areas are properly delineated in the project design and specifications. Those ESAs include, but may not be limited to, riparian/riverine vegetation, San Jacinto River alkali communities, and areas with long term-conservation values for the San Jacinto Valley crownscale, spreading navaretia, Coulter's goldfields, smooth tarplant, least Bell's vireo, burrowing owl, Los Angeles pocket mouse, and San Bernardino kangaroo rat.</p> <p>Prior to site preparation, clearing, or construction, the RCTC Resident Engineer will require the Construction Contractor and the Project Biologist to install highly visible barriers (such as orange construction fencing) around all designated ESAs. No disturbance, grading, staging, parking, materials or equipment storage, fill structures, dumping, or other construction related activities will be permitted within the ESAs. All construction equipment will be operated and construction activities conducted in a manner so as to prevent accidental damage to ESAs. No construction equipment is to enter any ESA at any time.</p> <p>The RCTC Project Engineer will require the Construction Contractor to maintain all ESA barriers throughout all the site preparation, disturbance, and construction activities in the vicinity of the ESAs.</p>	RCTC Project Manager and Project Engineer	During final design		
		RCTC Resident Engineer	Prior to site preparation, clearing, or construction		
		RCTC Project Engineer	During all site preparation, disturbance, and construction activities		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	The Project Biologist will be required to verify the integrity of the ESA barriers on a regular basis and will require the Construction Contractor to repair damaged or replace missing ESA barriers within 24 hours of being notified of the status of the ESA barriers.	Project Biologist	During all site preparation, disturbance, and construction activities		
	During all site preparation, clearing, disturbance, and construction activities, the RCTC Project Engineer will require the Construction Contractor to ensure that equipment maintenance, site lighting, and equipment and materials staging are limited to designated areas away from ESAs.	RCTC Project Engineer	During all site preparation, disturbance, and construction activities		
NC-3	Nesting Birds. To avoid effects to nesting birds, the RCTC Project Engineer will require the Construction Contractor to conduct any native or exotic vegetation removal or tree trimming activities outside of the nesting bird season (i.e., March 1 to September 15).	RCTC Project Engineer	During the removal of any native or exotic vegetation and any tree trimming activities		
	In the event that vegetation clearing is necessary during the nesting season (i.e., March 1–September 15), the RCTC Resident Engineer will require the Construction Contractor to have the Project Biologist conduct a preconstruction survey to identify the locations of listed and nonlisted bird nests within 3 days of the commencement of construction activities. Should nesting birds be found, the RCTC Resident Engineer will require the Construction Contractor to establish an exclusionary buffer around the nest developed in consultation among the RCTC Resident Engineer, the RCTC Contract Biologist, the Construction Contractor, and the Project Biologist. This buffer will be clearly marked in the field by construction personnel under guidance of the Project Biologist, and construction or clearing will not be conducted within this buffer zone until the Project Biologist determines that the young have fledged or the nest is no longer active.	RCTC Resident Engineer and the Project Biologist	Prior to the removal of any native or exotic vegetation and any tree trimming activities during the nesting seasons		
NC-4	Design and Construction Management Measures. During final design, the RCTC Project Engineer and the Contract Biologist will coordinate with the Design Contractor and the Project Biologist to develop design and construction management specifications to direct temporary construction noise, nighttime construction lighting, and permanent facility lighting away from the wildlife corridors, biologically sensitive areas, the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Conservation Areas, and vegetated drainages. Those specifications will be included in the final design.	RCTC Project Engineer and the Project Biologist	During final design		
	If construction work must be done at night, the RCTC Resident Engineer will require the Construction Contractor to properly implement the specifications included in the final design to direct temporary construction noise and lighting away from the wildlife corridors, and biologically sensitive areas during those nighttime construction activities.	RCTC Resident Engineer and the construction contractor	During nighttime construction activities		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	During construction, the RCTC Resident Engineer will ensure that the Construction Contractor properly implement the permanent facility lighting, directing the light from wildlife corridors, biologically sensitive areas, the Western Riverside County MSHCP Conservation Areas, and vegetated drainages.	RCTC Resident Engineer and the construction contractor	During construction		
NC-5	Conservation Areas. During final design, the RCTC Project Engineer and the Contract Biologist will coordinate with the Design Engineer and the Project Biologist to identify existing and proposed conservation areas within the project footprint and in the immediately surrounding areas and will designate those areas on the project specifications.	RCTC Project Engineer	During final design		
	During final design, the RCTC Project Engineer and Project Biologist will ensure the design for the wildlife crossing entrance at Wildlife Crossing No. 10 will minimize noise effects to the adjacent MSHCP Conservation Area and ensure that noise effects do not exceed residential noise standards.	During final design	RCTC Project Engineer and Project Biologist		
	To reduce impacts where the project interfaces with existing or proposed conservation areas, RCTC's Resident Engineer will ensure that the project designs and specifications comply with the Urban/Wildlands Interface Guidelines in Section 6.1.4 of the Western Riverside County MSHCP. The RCTC Resident Engineer will ensure that the project specifications include the applicable guidelines from the Western Riverside County MSHCP and as discussed in Section 3.17.3 of this RDEIR/SDEIS.	RCTC Resident Engineer	Prior to and during construction		
	Prior to and during construction, RCTC will require the design contractor and the Construction Contractor to comply with guidelines from the MSHCP and be included in the project specifications.	RCTC Resident Engineer	Prior to and during construction		
NC-6	Determination of Biological Equivalent or Superior Preservation for Riparian/Riverine Areas. Prior to approval of the Final EIR/EIS, the RCTC Project Manager and the Contract Biologist will prepare a Determination of Biological Equivalent or Superior Preservation (DBESP) for impacts to Western Riverside County MSHCP riparian/riverine habitat pursuant to Section 6.1.2 of the Western Riverside County MSHCP. Measures provided in the DBESP will demonstrate that equivalent or superior conservation for riparian/riverine areas will be achieved through habitat restoration and/or enhancement of on-site areas along the length of the MCP. However, if it is infeasible to mitigate entirely on site, alternative off-site mitigation, such as enhancement, creation, and restoration, would be required as documented in the DBESP. Measures for the project's permanent impacts to riparian/riverine areas will occur at a minimum 2:1 replacement ratio. A minimum 1:1 replacement ratio will occur within the San Jacinto River watershed for replacement of area and function (i.e., establishment or reestablishment). Additional mitigation to achieve the remainder of the	RCTC Project Manager and Contract Biologist	Prior to certification of the Final EIR/EIS		

Environmental Commitments Record

	<p>minimum 2:1 replacement ratio may occur outside of the San Jacinto River watershed. Measures for temporary impacts to riparian/riverine areas will occur at a minimum 1:1 replacement ratio.</p> <p>Other forms of compensatory mitigation, such as enhancement or rehabilitation, may be used to achieve ratios in excess of the minimum 2:1 replacement, with consideration of relative functions, mitigation timing, etc. If any additional compensation for temporal loss of habitat is required beyond the minimum 1:1 replacement ratio, this mitigation would occur through an approved mitigation bank or in-lieu fee program.</p> <p>After completion of the implementation of the DBESP measures for riparian/riverine areas, the RCTC Project Manager will work with the RCTC Right-of-Way Agent to ensure that all off-site mitigation areas will be conserved in perpetuity, either through fee title transfer or a conservation easement to the Western Riverside County Regional Conservation Authority (RCA).</p>				

WETLANDS AND OTHER WATERS OF THE UNITED STATES

WET-1	<p>Permanent Impacts to Jurisdictional Areas. Prior to, during, and after construction, the Riverside County Transportation Commission (RCTC) shall mitigate permanent impacts to United States Army Corps of Engineers (USACE) jurisdictional wetlands and nonwetlands and California Department of Fish and Game (CDFG) jurisdictional areas at a minimum replacement ratio of 2:1. The RCTC Project Manager will provide for mitigation to occur primarily through habitat restoration and/or enhancement of on-site areas along the length of the Mid County Parkway (MCP) to the extent practical. Alternatively, if it is infeasible to mitigate entirely on site, the RCTC Project Manager will coordinate with USACE and CDFG to provide off-site mitigation, such as enhancement, creation, and restoration, in accordance with the Conceptual Mitigation Plan (Appendix P in the Environmental Impact Report [EIR]/Environmental Impact Statement [EIS]).</p> <p>The RCTC Project Manager will ensure that the mitigation implemented will comply with the federal policy of “no net loss” of wetlands. The RCTC Project Manager will ensure that a minimum of 1:1 replacement ratio will occur through establishment or reestablishment of jurisdictional areas within the San Jacinto River watershed. This will mitigate for the replacement of area and function of jurisdictional areas within the San Jacinto River watershed. Additional mitigation to achieve the remainder of the 2:1 mitigation ratio may occur outside of the San Jacinto River watershed.</p>	RCTC Project Manager	Prior to, during, and after construction

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
WET-2	<p>Temporary Impacts to Jurisdictional Areas. After the completion of construction in areas that resulted in temporary impacts to USACE and/or CDFG jurisdictional areas, the RCTC Resident Engineer will require the Construction Contractor to revegetate those on site areas at a minimum 1:1 replacement ratio. The revegetation will be conducted as described in the Habitat Mitigation Monitoring Plan in Measure WET-3 and in the applicable conditions from regulatory permits in Measure WET-4.</p>	RCTC Resident Engineer	After the completion of construction in areas that result in temporary impacts to jurisdictional area		
	<p>If additional compensation for temporary impacts beyond the minimum 1:1 on site replacement ratio is required as a result of the approved permits described in Measure WET-4, during final design and construction the RCTC Project Manager will arrange for RCTC to provide that additional mitigation through an approved mitigation bank or an in-lieu fee program.</p>	RCTC Project Manager	During final design and construction		
WET-3	<p>Habitat Mitigation Monitoring Plan. The RCTC Project Manager will contract with a biologist (Project Biologist) to develop a Habitat Mitigation Monitoring Plan to direct the restoration of impacted riparian habitats and USACE and CDFG jurisdictional areas. The Habitat Mitigation Monitoring Plan will incorporate the applicable approaches and measures identified in the Conceptual Mitigation Plan (Appendix P in the EIR/EIS). The Habitat Mitigation Monitoring Plan will be subject to approval by the USACE and the CDFG. The Habitat Mitigation Monitoring Plan, at a minimum, will meet the following requirements:</p> <ul style="list-style-type: none"> • Habitat replacement and/or enhancement ratio of at least 1:1 for temporary impacts; • Habitat replacement and/or enhancement ratio of 2:1 for permanent impacts to USACE jurisdictional wetlands/waters of the U.S. and CDFG jurisdictional areas; • A success criterion of at least 80 percent cover of native riparian vegetation for replaced habitat; • Additional requirements, including a minimum 3-year establishment period for the replacement habitat, regular trash removal, and regular maintenance and monitor in activities to ensure the success of the mitigation plan; and • Mitigation for impacts to Multiple Species Habitat Conservation Plan (MSHCP) riparian/riverine areas will be within the San Jacinto River watershed at a minimum 1:1 ratio for replacement of area and function (i.e., establishment or re-establishment). <p>Measure WET-3 will be implemented in conjunction with Measures WET-1 and WET-2, above.</p>	RCTC Project Manager	During final design

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
WET-4	<p>Permits. During final design, the RCTC Project Engineer will obtain the following permits in order to comply with Section 1600 of the Fish and Game Code and Sections 404 and 401 of the Clean Water Act. Any additional mitigation required by a regulatory agency beyond the measures outlined in WET-1 through WET-3 for purposes of compliance with California Environmental Quality Act (CEQA)/ National Environmental Policy Act (NEPA) will be negotiated during the permit application and approval process. Those mitigation requirements will incorporate approaches and measures identified in the Conceptual Mitigation Plan (provided in Appendix P in the EIR/EIS) and those described in Measures WET-1 through WET-3 above.</p> <ul style="list-style-type: none"> • A Section 404 permit from the USACE • A Section 1602 Agreement for Streambed Alteration from the CDFG, • A Section 401 water quality certification from the Santa Ana Regional Water Quality Control Board (RWQCB). <p>Mitigation ratios for the Section 404 permit will be finalized in coordination with the USACE using the most current version of the Corps South Pacific Division Regulatory Program Standard Operating Procedure for Determination of Mitigation Ratios.</p> <p>If additional compensation for permanent or temporary impacts beyond the minimum replacement ratios described in WET-1 and WET-2 is required as a result of the approved permits, during final design and construction, the RCTC Project Manager would arrange for RCTC to provide that additional mitigation through purchase of mitigation bank credits for removal of invasive plants and restoration of riparian habitat from a location approved by the USACE and the CDFG under guidelines described by the resource and regulatory agencies through the permitting process, or through participation in another approved habitat mitigation bank. Any additional amount of mitigation will be determined in coordination with the resource and regulatory agencies based on the quality and quantity of jurisdictional resources to be affected with consideration of the results from the study entitled <i>Potential Impacts of Alternative Corridor Alignments to Waters of the United States, Riparian Ecosystems, and Threatened and Endangered Species: Mid County Parkway Project, Riverside County, California</i> (Smith 2011).</p>	RCTC Project Engineer	During final design

PLANT SPECIES					
PS-1	<p>Determination of Biological Equivalent or Superior Preservation. Prior to certification of the Final Environmental Impact Report/Environmental Impact Statement (EIR/EIS), the Riverside County Transportation Commission (RCTC) Project Manager and the biologist under contract to the RCTC (RCTC Project Biologist) will obtain a Determination of Biological Equivalent or Superior Preservation (DBESP) for impacts to smooth tarplant and Coulter’s goldfields pursuant to Section 6.1.3 of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). Measures in the DBESP will demonstrate that equivalent or superior conservation for the species will be achieved through either location and preservation of populations that are not already proposed for conservation in the MSHCP, and/or restoration or enhancement of existing populations within the proposed conservation area. Mitigation for the project impacts to smooth tarplant and Coulter’s goldfields within the San Jacinto River floodplain will occur within the San Jacinto River floodplain.</p>	RCTC Project Manager	Prior to certification of the Final EIR/EIS		
	<p>After completion of the implementation of the DBESP measures for smooth tarplant and Coulter’s goldfields, the RCTC Project Manager will work with the RCTC Right-of-Way Agents to ensure that all off-site mitigation areas will be conserved in perpetuity, either through fee title transfer or a conservation easement to the Western Riverside County Regional Conservation Authority (RCA).</p>	RCTC Project Manager	After completion of the implementation of the DBESP		
ANIMAL SPECIES					
AS-1	<p>Burrowing Owl Habitat. During final design, the Riverside County Transportation Commission (RCTC) Project Engineer and Project Biologist will coordinate with the design contractor to identify all areas of potential burrowing owl habitat within the project footprint or in the immediately surrounding areas and will designate those areas on the project specifications.</p>	RCTC Project Engineer and the Project Biologist	During final design		
	<p>To ensure that any burrowing owl that may subsequently occupy the site are not affected by construction activities, the RCTC Resident Engineer will require the construction contractor to have preconstruction burrowing owl surveys conducted by the Project Biologist within 30 days prior to any phase of construction activities in the areas identified as potential burrowing owl habitat. These preconstruction surveys are also required to comply with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), the federal Migratory Bird Treaty Act (MBTA), and the California Fish and Game Code.</p>	RCTC Resident Engineer and the Project Biologist	30 days prior to any construction activities in potential burrowing owl habitat		

Environmental Commitments Record

	During all site preparation, disturbance, grading, and construction activities, the RCTC Resident Engineer will require the Construction Contractor to implement all burrowing owl measures, including the preconstruction surveys described above.	RCTC Resident Engineer	During all site preparation, disturbance, grading, and construction activities		
AS-2	Active Burrowing Owl Nests. During all site preparation, disturbance, grading, and construction activities, the RCTC Resident Engineer will require the Construction Contractor to avoid the take of active burrowing owl nests. If the focused burrowing owl surveys required in Measure AS-1 determine that the project disturbance limits support burrowing owls, the burrowing owls will be relocated or translocated, as required in the relocation/translocation plan required in Measure AS-3. No site preparation, disturbance, grading, or construction activities will be allowed in those areas until the Project Biologist confirms that the burrowing owl relocation/translocation activities are complete.	RCTC Resident Engineer and the Project Biologist	During all site preparation, disturbance, grading, and construction activities		
AS-3	<p>Burrowing Owl Relocation/Translocation Plan. During final design and no later than 60 days prior to any ground-disturbing activities, the RCTC Project Manager and Project Biologist will prepare burrowing owl nests, as described in AS-2. The RCTC Project Manager and the Project Biologist will submit the Plan to the California Department of Fish and Game (CDFG) for approval. The Plan will include, but not be limited to:</p> <ul style="list-style-type: none"> • A description of passive relocation techniques; • Methodology for monitoring and inspection of occupied and potentially suitable burrows; • Description of monitoring frequency to confirm owls have vacated occupied burrows within the MCP project footprint; • Requirement that any relocation and translocation will occur outside of the breeding season; and <p>Requirement that sites proposed for burrowing owl translocation sites will be identified and created in coordination with the wildlife agencies to establish new colonies.</p>	RCTC Project Manager and Project Biologist	During final design and no later than 60 days prior to any ground-disturbing activities		

Environmental Commitments Record

	During all site preparation, disturbance, grading, and construction activities in burrowing owl habitat, the RCTC Resident Engineer will require the Construction Contractor to implement the provisions in the Burrowing Owl Relocation/Translocation Plan. The RCTC Project Biologist will monitor the Construction Contractor's compliance with the provision of that Plan.	RCTC Resident Engineer	During all site preparation, disturbance, grading, and construction activities in burrowing owl habitat		
AS-4	Determination of Biologically Equivalent or Superior Preservation. Prior to certification of the Final Environmental Impact Report (EIR)/Environmental Impact Statement (EIS), the RCTC Project Manager and the biologist under contract to the RCTC (Project Biologist) will obtain a Determination of Biologically Equivalent or Superior Preservation (DBESP) for impacts to Los Angeles pocket mouse near Lake Perris pursuant to Sections 6.1.2 and 6.1.3 of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). Mitigation in the DBESP will demonstrate that equivalent or superior conservation for these species will be achieved through preservation of populations that are not already proposed for conservation in the MSHCP and/or restoration/enhancement of existing populations within the Western Riverside County MSHCP conservation area. The RCTC will ensure that all mitigation areas will be conserved in perpetuity, either through fee title transfer or a conservation easement to the Regional Conservation Authority (RCA).	RCTC Project Manager	Prior to certification of the Final Environmental Impact Report (EIR)/Environmental Impact Statement (EIS)		
AS-5	Bat Maternity Roosting Survey. During the month of June prior to any site preparation, disturbance, grading, or construction activities, the RCTC Resident Engineer will require the Construction Contractor to have a qualified bat biologist survey the project limits, to assess the presence of or potential for bat maternity roosts, which are generally formed in spring and may change seasonally. Where existing or potential roosting habitat is present, the qualified bat biologist will conduct nighttime surveys that include a combination of structure inspection, sampling, exit counts, and acoustic surveys. A report will be prepared summarizing the data collected during these nighttime surveys, and will include any necessary avoidance and minimization recommendations such as directing light and noise away from bat habitat, humane bat eviction/exclusion, and replacement roosting habitat.	RCTC Resident Engineer and the Project Biologist	At least 1 year, but no more than 2 years prior to any site preparation, disturbance, grading, or construction activities		
AS-6	Humane Bat Eviction/Exclusion. Prior to site preparation, disturbance, grading, or construction activities in areas containing bat habitat, the RCTC Resident Engineer will require the Construction Contractor to install temporary bat eviction/exclusion devices under the supervision of a qualified bat biologist. The installation of the exclusion devices will be limited to the fall (September and October) preceding construction activities at structures containing bat habitat, in order to avoid trapping flightless young	RCTC Resident Engineer	Prior to site preparation, disturbance, grading, or construction activities		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	<p>inside these structures during the summer or hibernating individuals during the winter. The exclusion devices must be retained in place to keep each structure free of bats until the completion of construction at that location. All bat exclusion devices and techniques will be coordinated with the California Department of Transportation (Caltrans) Biologist, the RCTC Project Manager, the RCTC Resident Engineer, the Construction Contractor, the Project Biologist, and the qualified bat biologist.</p> <p>In cases where bats are evicted from maternity roosts, and will remain excluded from these roosts throughout the maternity season (April through August), the RCTC Resident Engineer and the Project Biologist will ensure that the replacement of roosting structures will be provided to minimize effects to excluded bats by providing an alternative site for these bats to rear young during the maternity seasons.</p>				
AS-7	<p>Retention of Existing Bat Roosting Habitat and Creation of Habitat Replacement Structures. Prior to any site preparation, disturbance, grading, or construction, the RCTC Project Engineer and the RCTC Contract Biologist will determine whether structural features providing existing bat roosting habitat cannot be permanently retained following construction. If that is the case, the qualified bat biologist will identify alternative roosting habitat/replacement structures to be installed during construction. The project specifications will include suitable designs and specifications for bat exclusion and habitat replacement structures.</p>	RCTC Project Engineer	Prior to any site preparation, disturbance, grading, or construction		
	<p>Prior to and during construction, the RCTC Resident Engineer will require the Construction Contractor to properly implement the designs and specifications for bat exclusion and habitat replacement structures included in the project specifications. The installation and maintenance of those structures will be monitored by the Project Biologist.</p>	RCTC Resident Engineer	Prior to and during construction		
THREATENED AND ENDANGERED SPECIES					
TE-1	<p>Determination of Biologically Equivalent or Superior Preservation. Prior to certification of the Final Environmental Impact Report (EIR)/Environmental Impact Statement (EIS), the Riverside County Transportation Commission (RCTC) Project Manager and the biologist under contract to the RCTC (Project Biologist) will obtain a Determination of Biologically Equivalent or Superior Preservation (DBESP) for impacts to spreading navarretia, San Jacinto Valley crownscale, least Bell's vireo, and San Bernardino kangaroo rat pursuant to Sections 6.1.2 and 6.1.3 of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). Mitigation in the DBESP will demonstrate that equivalent or superior conservation for these species will be achieved through preservation of populations that are not already proposed for</p>	RCTC Project Manager	Prior to certification of the Final EIR/EIS

	<p>conservation in the MSHCP and/or restoration/enhancement of existing populations within the Western Riverside County MSHCP conservation area. Mitigation for the project impacts to spreading navarretia and San Jacinto Valley crownscale within the San Jacinto floodplain will occur within the San Jacinto floodplain.</p> <p>After completion of the implementation of the DSESP measures for spreading navarretia, San Jacinto Valley crownscale, least Bell's vireo, and San Bernardino kangaroo rat, the RCTC Project Manager will work with the RCTC Right-of-Way Agents to ensure that all off-site mitigation areas will be conserved in perpetuity, either through fee title transfer or a conservation easement to the Western Riverside County Regional Conservation Authority (RCA).</p>				
TE-2	<p>Stephens' Kangaroo Rat. Prior to construction, the RCTC Project Manager will ensure "take" is authorized. RCTC will voluntarily pay mitigation fees (\$500/gross project acre) to mitigate for disturbance of occupied Stephens' kangaroo rat habitat.</p>	RCTC Project Manager	Prior to construction		

INVASIVE SPECIES

IS-1	<p>Landscaped Disturbed Areas. During construction, the Riverside County Transportation Commission (RCTC) Resident Engineer will require the Construction Contractor to landscape/revegetate disturbed areas and bare soil in the project disturbance limits with California Department of Transportation (Caltrans) recommended seed mixtures and container plants from locally adapted species to preclude the invasion of noxious weeds. The use of site-specific materials adapted to local conditions increases the likelihood that the landscaping/revegetation will be successful and maintain the genetic integrity of the local ecosystem.</p>	RCTC Resident Engineer	During construction		
	<p>The RCTC Resident Engineer and the Construction Contractor will ensure that the invasive plant species listed in the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), Table 6-2, are not planted within the project area.</p>	RCTC Resident Engineer	During construction		
	<p>During construction, the RCTC Resident Engineer will require the Construction Contractor to submit the proposed seed mixtures for the parts of the project under Caltrans jurisdiction for approval by a Caltrans District 8 Landscape Architect. No landscaping/revegetation in state right of way will be installed prior to Caltrans approval of the seed mixtures.</p>	RCTC Resident Engineer	During construction		
	<p>Prior to and during construction, RCTC will require the Construction Contractor to require the Project Biologist to make arrangements well in advance of planting (at least 9 months prior to the scheduled planting) to ensure that the needed plant materials are collected and/or located and available for the scheduled planting time. Sufficient time must be allocated for a professional seed company to visit the project site during the appropriate</p>	RCTC Resident Engineer	Prior to and during construction		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
	season to collect native plant seed.				
	If local propagates are not available or cannot be collected in sufficient quantities to meet the scheduled planting time, plant materials collected or grown from other sources within southern California can be substituted, based on approval of use of those alternative plant materials by the RCTC Resident Engineer and the RCTC Contract Biologist, and for areas in the State right of way, by the Caltrans District 8 Landscape Architect.	RCTC Resident Engineer and the RCTC Contract Biologist	Prior to and during construction		
	For widespread native herbaceous species that are more likely to be genetically homogeneous, site specificity is a less important consideration, and seed and container plants from commercial sources may be used based on approval of use of those alternate plant materials by the RCTC Resident Engineer and the RCTC Contract Biologist, and for areas in the state right of way, by the Caltrans District 8 Landscape Architect.	RCTC Resident Engineer and the RCTC Contract Biologist	Prior to and during construction		
IS-2	Seed Purity. During construction, as seed mixtures are collected, the RCTC Resident Engineer will require the Construction Contractor to require the Project Biologist to certify the seed purity by planting seed labeled under the California Food and Agricultural Code or that has been tested within the year by a seed laboratory certified by the Association of Official Seed Analysts or by a seed technologist certified by the Society of Commercial Seed Technologists. The Project Biologist will provide the documentation of compliance with this requirement to the RCTC Project Engineer and the RCTC Contract Biologist, and for seed mixtures that will be used in the state right of way, to the Caltrans District 8 Landscape Architect.	RCTC Resident Engineer and the Project Biologist	During construction		
IS-3	Construction Equipment. During all site preparation, disturbance, grading and construction activities, the RCTC Resident Engineer will require that the Construction Contractor implement procedures to ensure that construction equipment is cleaned of mud or other debris that may contain invasive plants and/or seeds and inspected to reduce the potential of spreading noxious weeds both before mobilizing to arrive at the site and before leaving the site. The Construction Contractor will document that equipment coming to the site will be cleaned at established truck wash facilities within the project vicinity and will provide facilities within the project limits to clean equipment leaving the site.	RCTC Resident Engineer	During all site preparation, disturbance, grading, and construction activities		
IS-4	Trucks. During all site preparation, disturbance, grading and construction activities, the RCTC Resident Engineer will require the Construction Contractor to implement procedures to ensure that all trucks carrying vegetation from the project limits are covered and that all vegetative materials removed from the project limits are properly disposed of in accordance with all applicable laws and regulations.	RCTC Resident Engineer	During all site preparation, disturbance, grading, and construction activities		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
IS-5	Inspected Material. During all site preparation, disturbance, grading, and construction activities, the RCTC Resident Engineer will require the Construction Contractor implement procedures to ensure that if material is obtained from a borrow site, that the material is inspected for the presence of noxious weeds and invasive plants to ensure that the material imported to the project site does not contain noxious weeds or invasive plants. The RCTC Resident Engineer will require the Construction Contractor to provide written documentation of the procedures and the implementation of those procedures whenever borrow material is brought to the project site.	RCTC Resident Engineer	During all site preparation, disturbance, grading, and construction activities		
IS-6	Weeds and Invasive Plants. During all site preparation, disturbance, grading, and construction activities, the RCTC Resident Engineer will require the Construction Contractor to control, kill, and remove noxious weeds and invasive plants from the project site, under the direction of the Project Biologist.	RCTC Resident Engineer	During all site preparation, disturbance, grading, and construction activities

	Designation and monitoring of Environmentally Sensitive Areas (ESAs) for two cultural sites	RCTC Project Engineer	Prior to and during construction		
	Memorandum of Agreement (MOA) for Sites 33-16598, 33-19862, 33-19863, 33-19864, and 33-19866; MOA will include a Discovery and Monitoring Plan.	RCTC Project Manager	Prior to approval of Final EIS		
MITIGATION MEASURES FOR SAN JACINTO WILDLIFE AREA					
SJWA-1	<p>Prior to the initiation of project construction in the vicinity of the intersection of Bernasconi Road and the Ramona Expressway, the RCTC will acquire replacement land for the 3.4 acres (ac) of land acquired for the project from the San Jacinto Wildlife Area as follows:</p> <ul style="list-style-type: none"> • The replacement land will be provided at a 2:1 ratio (for a total 6.8 ac of replacement land) • The replacement land will be from areas adjacent to the Davis or Potrero Units of the San Jacinto Wildlife Area or another area acceptable to CDFG • After RCTC acquires the replacement land, it will convey the fee ownership for the replacement land to CDFG 	RCTC Project Manager	Prior to Construction		
SJWA-2	<p>The MCP project is a Covered Activity of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) and, therefore, the use of 3.4 ac of land in the San Jacinto Wildlife Area would be subject to the requirements for replacement of Public/Quasi-Public lands as required by the Western Riverside County MSHCP. Those requirements for habitats in existing Public/Quasi-Public Lands used by a project are the purchase and dedication into the MSHCP Conservation Area of replacement land at not less than a ratio of 1:1.</p> <p>RCTC's compliance with the requirements of Measure SJWA-1 would also satisfy the requirements for replacement of Public/Quasi-Public Lands used by the project under the Western Riverside County MSHCP.</p>	RCTC Project Manager	Prior to Construction		

Environmental Commitments Record

No.	Avoidance, Minimization, and Mitigation Measures	Responsible Party	Timing/Phase	Action Taken to Comply with Avoidance, Minimization, and Mitigation Measures	Date
SJWA-3	For the acquisition of the 3.4 ac in the San Jacinto Wildlife Area, RCTC's Right-of-Way Agents will follow the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Uniform Act) and the 1987 Amendments as implemented by the Uniform Relocation Assistance and Real Property Acquisition Regulations for Federal and Federally Assisted Programs.	RCTC Project Manager	Prior to Construction		
Climate Change Measures:		RCTC Project Engineer	During final design		
1.	Landscaping reduces surface warming, and through photosynthesis, decreases CO2. Landscaping would be provided where necessary within the corridor to provide aesthetic treatment, replacement planting, or mitigation planting for the project. The landscape planting would help offset any potential CO2 emissions increase.	RCTC Project Engineer	During final design		
2.	The project would incorporate the use of energy-efficient lighting, such as light-emitting diode (LED) traffic signals. LED bulbs—or balls, in the stoplight vernacular—cost \$60 to \$70 apiece but last 5 to 6 years, compared to the 1-year average lifespan of the incandescent bulbs previously used. The LED balls themselves consume 10 percent of the electricity of traditional lights, which will also help reduce the project's CO2 emissions.	RCTC Project Engineer	During final design		
3.	According to Caltrans Standard Specification Provisions, idling time for lane closure during construction is restricted to 10 minutes in each direction. In addition, the contractor must comply with Title 13, California CCR Section 2449(d)(3) that was adopted by the ARB on June 15, 2008. This regulation restricts idling of construction vehicles to no longer than 5 consecutive minutes. Compliance with this regulation reduces harmful emissions from diesel-powered construction vehicles.	RCTC Resident Engineer	During construction
